Always responsive

Responsive tables allow tables to be scrolled horizontally with ease. Make any table responsive across all viewports by adding .table-responsive class on .table.

Or, pick a maximum breakpoint with which to have a responsive table up to by adding .table-responsive{-sm|-md|-lg|-xl}. Read full documnetation here.

Vertical clipping/truncation

Responsive tables make use of overflow-y: hidden, which clips off any content that goes beyond the bottom or top edges of the table. In particular, this can clip off dropdown menus and other third-party widgets.
