Always responsive

Responsive tables allow tables to be scrolled horizontally with ease. Make any table responsive across all viewports by adding `.table-responsive` class on `.table`. Or, pick a maximum breakpoint with which to have a responsive table up to by adding `.table-responsive{-sm|-md|-lg|-xl}`. Read full documnetation here.

Vertical clipping/truncation

Responsive tables make use of `overflow-y: hidden`, which clips off any content that goes beyond the bottom or top edges of the table. In particular, this can clip off dropdown menus and other third-party widgets.
